# Lucas Mauricio

**Frontend Software Engineer | React, Next.js & TypeScript**

+55 (19) 99884-6691 | lucasmauricio27@gmail.com | linkedin.com/in/lucas-mauricio-6b1478211 | github.com/LucaasMa | Campinas, Brazil (UTC-3)

## PROFESSIONAL SUMMARY

Frontend Developer with over 4 years of experience building and maintaining responsive, scalable web applications with **React.js, TypeScript and Node.js**. Experienced in writing clean, modular and maintainable JavaScript and TypeScript code, integrating frontend components with **RESTful APIs and Backend-for-Frontend (BFF)** layers, diagnosing performance bottlenecks, and sustaining over **85% test coverage** with Jest, React Testing Library and Playwright. Reduced application load time by **approximately 90%** with a Node.js caching API layer and cut screen load time from **5.4 s to 2.2 s**. Three years of fully remote, asynchronous work with distributed teams, including daily **English** communication with US-based teams in California and daily use of **AI-assisted development** tools.

## CORE COMPETENCIES

React.js, Next.js & TypeScript • Node.js, REST APIs & BFF • Application Performance Optimization • Unit, Component & E2E Testing • Clean, Modular Architecture • Production Bottleneck Diagnosis • AI-Assisted Development • Remote US Collaboration (Fluent English)

## WORK EXPERIENCE

**CPQD** November 2023 - Present

*Frontend Developer* *Remote, Campinas, Brazil*

- Sustained over **85% test coverage** on critical flows by designing a layered test strategy (**unit, component and end-to-end** with **Jest, React Testing Library and Playwright**) wired into the Jenkins CI/CD pipeline
- Cut a slow icon picker's open time from **1,756 ms to 136 ms** and raised the frame rate while filtering from **30 to 60 FPS** (worst frame 491 ms to 45 ms) by virtualizing ~2,200 items with TanStack Virtual and moving per-item styling out of the CSS-in-JS runtime, measured under 4x CPU throttling with before/after recordings
- Cut a screen's load time from **5.4 s to 2.2 s**, confirmed by QA, by converting pasted images to WebP in the browser, compressing payloads before upload and rendering rich text lazily without loading the editor (10-image test: **4,952 kB to 809 kB**)
- Simplified frontend integration with backend services by defining **REST API** contracts with backend engineers and proposing a **Backend-for-Frontend (BFF)** layer that decoupled the interface from raw service contracts
- Unblocked **SSO user provisioning** in Nextcloud when the backend team was stuck by documenting the problem, ruling out fragile browser-side workarounds and triggering OIDC auto-provisioning through an authenticated WebDAV request, validated locally and in QA
- Reduced interface inconsistency and rework across multiple product teams by contributing reusable components and conventions to the corporate Design System, then packaged it for an external partner team with no codebase access (**25 components**, light and dark themes, navigable Storybook), removing parts that exposed internal features, authentication and API endpoints
- Raised engineering practices across the frontend group by hosting the Frontend Chapter with recurring technical sessions and mentoring, and led **AI-assisted coding** adoption on a client project, including a talk on AI tools for frontend development and moderating the company's AI discussion round
- Delivered a real-time voice biometrics interface that received the highest client satisfaction rating in the portfolio, by architecting the React application over a **WebSocket** stream with live charting and presenting it at the delivery meeting

**Turing** January 2026 - August 2026

*Frontend Developer (React) - Contract* *Remote, California, United States*

- Delivered production user interfaces for **AI agent** training environments used by clients such as Microsoft and Amazon, by building **React and Next.js** applications from defined specifications in an asynchronous, distributed US team
- Shortened development cycle time under tight deadlines by introducing **AI-assisted engineering workflows** and documenting the conventions and review practices the team adopted
- Increased delivery predictability and team throughput by co-leading projects end to end, turning requirements into scoped work, distributing tasks and owning progress reporting in the tech lead's absence
- Collaborated daily in **English** with designers, product stakeholders and engineers across time zones

**MMarketplaces** December 2023 - April 2024

*Frontend Developer - Contract* *Remote, Brazil*

- Reduced application load time by **approximately 90%** by diagnosing that the real bottleneck was redundant third-party API calls rather than rendering, then building a **Node.js API layer** that centralized those integrations and cached previously fetched data
- Simplified multi-marketplace integration by designing **REST endpoints** that aggregated and normalized responses from distinct providers into a single contract for the frontend
- Established a scalable, component-based architecture by leading the full rebuild of a legacy application in **React and TypeScript** as sole frontend developer, defining project structure, component patterns, Redux state approach and data-fetching strategy up front
- Enabled data-driven business decisions by building a responsive operational dashboard with interactive charts, large filterable tables and URL-driven pagination over live marketplace data

**CPQD** December 2022 - November 2023

*Frontend Development Intern* *Remote, Campinas, Brazil*

- Built the billing and debt-negotiation module of the Billing project across its full development cycle, from module creation to project close, delivering new features that followed the team's code standards
- Worked through pair programming and code reviews, in constant collaboration with requirements analysts, designers and backend developers to keep quality high and minimize rework

**HIIT and Tabata** July 2022 - April 2023

*Frontend Developer - Contract* *Remote, Brazil*

- Delivered responsive, accessible interfaces compatible across devices and browsers by building the platform with React, JavaScript, SCSS and Material UI, working directly from designs with a cross-functional team
- Extended the product to mobile by delivering a cross-platform application with React Native providing workout-management features for fitness trainers

## PROJECTS

**roadmap.sh — Frontend Roadmap** *Open Source*

Approved contributor to roadmap.sh (Frontend Roadmap) with content about Design Systems

## EDUCATION

**Bachelor of Science in Computer Engineering** *FACAMP - Faculdades de Campinas* 2019 - 2023

*Campinas, Brazil*

## SKILLS

**Frontend Core:** React.js, Next.js, TypeScript, JavaScript (ES6+), React Hooks, HTML5, CSS3

**API Integration:** RESTful APIs, WebSockets, Backend-for-Frontend (BFF), Node.js, OIDC/SSO, WebDAV, asynchronous data fetching, caching strategies

**Performance:** Load time optimization, bundle optimization, render optimization, real-time data rendering, large table and list performance, list virtualization (TanStack Virtual), image optimization

**Testing:** Unit testing, component testing, end-to-end testing, Jest, Vitest, React Testing Library, Playwright

**Code Quality and Architecture:** Clean, modular and maintainable code, reusable component architecture, Design Systems, Storybook, Micro Frontends (Module Federation), code review, technical documentation

**State Management:** Redux, Redux Toolkit, Context API, TanStack Query (React Query), component state design

**Responsive Design and CSS:** Responsive and mobile-first design, cross-browser compatibility, SCSS and Sass, Styled Components, Emotion, Tailwind CSS, Material UI (MUI), CSS Flexbox and Grid, Web Accessibility (WCAG)

**Tooling and CI/CD:** Git, GitHub, GitHub Actions, Jenkins, Vite, Webpack, npm

**AI-Assisted Development:** Claude Code, Cursor (daily use in delivery workflows)

**Methodologies:** Agile, Scrum, Kanban, cross-functional collaboration, mentoring

**Languages:** Fluent English (written and verbal, daily use with US-based teams); Native Portuguese
